CRYPTO

Bitcoin (BTC)

Trading ~\$63K-\$65K; recovered from a June cycle low of ~\$59,100 after \$3B+ in liquidations. MVRV ~1.1 (CryptoQuant), just above the historical undervaluation zone matching 2015/2019/2022 lows. Perp funding flipped slightly positive after months negative. ETF outflows hit a record ~\$3.4B in a single week (IBIT alone: ~\$1.34B); pace slowed in the June 8-13 window. Support: \$60K-\$62K. Resistance: \$66K-\$68K, then 200-day EMA ~\$76K-\$80K.

Ethereum (ETH)

~\$1,620-\$1,720, down ~62% from its \$4,953 ATH (Aug 2025). Glamsterdam upgrade slipped from June to Q3 2026, removing the main near-term catalyst (gas limit 60M to 200M, 78% smart-contract gas reduction, EIP-7732). L2 adoption and DeFi revenues structurally intact.

Hyperliquid (HYPE)

~\$58-\$63, off ATH of \$75.52 (Jun 2) but still +160% YTD. Three competing US ETFs live: 21Shares THYP (0.30%), Bitwise BHYP (0.34%), Grayscale HYPG (0.29% + ~2.2% staking yield). ~99% of fees go to HYPE buybacks; \$1B+ cumulative. ~60% of global on-chain perp OI.

Zcash (ZEC)

~\$530, recovering strongly from a ~50% crash after the Orchard shielded pool vulnerability disclosure. Pre-exploit peak ~\$543 on Multicoin Capital's privacy thesis (CBDC/surveillance concerns). Emergency fix applied; Ironwood upgrade targets July. June 14 external audit: clean, no new bugs found. Core thesis intact; chart still repairing.

Solana + Altcoins

SOL (~\$64-\$67): tokenized RWA hit \$2.7B ATH Jun 10 (+34% from Q1); tokenized SpaceX shares launched on Solana. Alpenglowl upgrade (~150ms finality) targets Q3. Humanity Protocol H token: private-key exploit Jun 8 wiped ~\$1B. Custody hygiene is non-negotiable.

MACRO

May CPI: 4.2% Headline, 2.9% Core

Released Jun 10. Headline +0.5% MoM / +4.2% YoY - highest since April 2023; energy accounted for 60%+ of monthly increase (+3.9% MoM, +23.5% YoY) on Hormuz disruption. Core +0.2% MoM / +2.9% YoY, one tick below the 0.3% consensus. PPI (Jun 11): +1.1% MoM / +6.5% YoY - highest since Nov 2022; core PPI 0.4% MoM, below estimates. The 130bp headline-vs-core gap is the central tension: energy-driven, not yet broad demand-side.

Fed: Warsh's First Meeting (Jun 16-17)

Hold at 3.50-3.75% near-certain (CMC: 96.3%; Polymarket: 99.6%). Warsh's first press conference as Chair (Wed 2:30pm ET) is what markets are actually trading. Key watch: does the statement drop the easing-bias sentence? Warsh is known for price-stability hawkishness. Updated dot plot will flag whether a year-end hike is formally on the table. ECB hiked to 2.25% (effective Jun 17) - first major central bank hike since Sept 2023.

Equities and SpaceX IPO

S&P; 500: 7,431 (+0.5% Fri). Nasdaq: 25,889. Dow: 51,202. Recovered from Jun 5 chip selloff (-4.18% Nasdaq). SpaceX IPO Jun 12: priced \$135/share, raised \$75B (largest IPO in history, 2x+ Saudi Aramco 2019). Opened \$150, closed \$161.11 (+19%), valued ~\$1.77T. Ineligible for S&P; 500 until Jun 2027 (seasoning rule). SOX semiconductor index is the key directional tell for tech this week.

Oil, Geopolitics, Gold and Dollar

WTI ~\$80-\$85/bbl, Brent ~\$84-\$88/bbl - lowest since early March on reports of an imminent US-Iran 14-point deal (Hormuz reopens in 30 days, sanctions lifted, nuclear program dismantled). Possible Switzerland signing Jun 19. A confirmed deal is the most deflationary macro event of 2026.

Gold ~\$4,310/oz, 2nd consecutive weekly decline - rate-hike expectations overriding safe-haven bid. 10Y yield ~4.49-4.50%. DXY ~99.75, firm but range-bound.

Key Risks: Warsh drops easing bias + hawkish dots = yields spike, BTC tests \$60K; Iran deal collapses = oil re-spikes, hike odds surge; continued ETF outflows; Glamsterdam delay triggers further ETH selling; semis fail to recover.

Catalysts: Iran deal signed Jun 19 = oil falls hard, CPI trajectory reverses, risk-on rally; Fed retains easing bias = relief across crypto/equities; ETF outflow pace continues slowing; MVRV at 1.1 attracts on-chain accumulation.

WEEK AHEAD | KEY EVENTS

DATE	EVENT	WHY IT MATTERS
Mon Jun 15	FOMC Meeting Day 1	Two-day meeting begins. Watch for pre-meeting Warsh signals.

Wed Jun 17	FOMC Decision + May Retail Sales	Hold near-certain. Key: easing-bias language survives? Warsh press conf. 2:30pm ET. Retail sales pre-open = consumer health. Most market-moving day of the week.
Thu Jun 18	Weekly Jobless Claims	Labor market health. Strong = more hike pressure. Weak = Fed breathing room.
Fri Jun 19	Juneteenth - Markets CLOSED + Possible Iran Signing	US stocks + bonds closed. Crypto/oil trade 24/7 and price the deal first. Switzerland signing of US-Iran deal reportedly targeting this date.
Ongoing	US-Iran Deal Watch	The override event. Signed = oil collapses, disinflation, risk-on for BTC. Collapse = oil re-spikes, hawkish Fed, BTC retests \$59,100.
