RISKS & OUTLOOK

BEARS WATCH

CPI hot print Tuesday — energy surprise or sticky services keep YoY above 3.9%, Warsh leans hawkish in testimony → September hike fully priced, DXY breaks 101.39, crypto ETF reversal flips back to outflows. **Iran full closure** — Hormuz shuts meaningfully, oil back toward \$85, June CPI becomes a one-month artifact, peak inflation thesis collapses. **Bank earnings disappoint** — loan loss provisions, weak net interest margin guidance.

BULLS WATCH

CPI soft print + patient Warsh — YoY falls to 3.8% or below, Warsh signals data-dependence without hawkish lean → rate cut conversation re-enters for late 2026, DXY softens, BTC targets \$65K+, ETF inflows build for a second week. **Iran talks resume post-Khamenei funeral** — Hormuz reopening accelerates, oil retreats, inflation peak thesis confirmed. **TSMC guidance Thursday** — if AI chip demand is described as insatiable, tech rebounds sharply and crypto benefits from risk-on.
